

Technical Information

Alaska Public Health Training Network usually broadcasts, via satellite, a health-related program every Thursday morning at 9am till 11:30 over the University of Alaska Southeast's Alaska 3 (Ak3) signal. Most programs cover bio-terrorism but other health issues are occasionally covered.

Ak3 is an MPEG2DVB digitally encoded free-to-air signal located in GE-8 at 139 degrees west. To receive that Ak3 signal, you must have an MPEG2DVB capable receiver with the appropriate frequencies entered and a satellite dish that can see GE-8.

If you can receive ARCS, Gavel to Gavel, or the PBS superstation you can receive Ak3. The correct information to input into your receiver can be obtained by calling UAS Media Services at (907) 465-6463.

If you are unsure if your community can show APHTN programming, if you are currently having problems getting APHTN programming, or if your organization has ideas for APHTN programming, please contact us.
